

Facility CMIS integration guide

December 2021

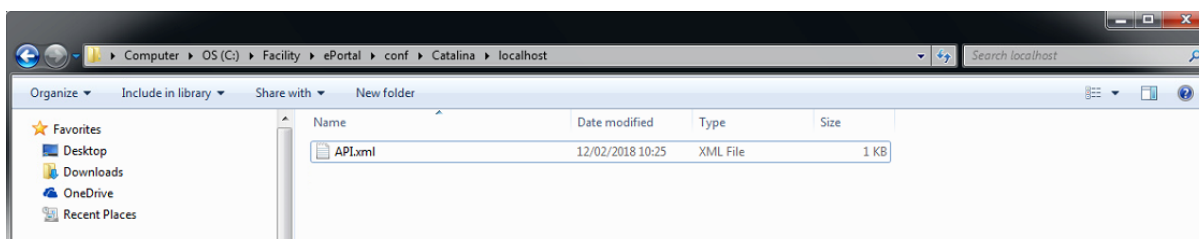

Cmis (Eportal) integration guide

A third party application used by your school uses Wonde to access school data from a number of MIS providers such as Facility CMIS. As your school is yet to have the integration setup with Wonde the following steps need to be completed.

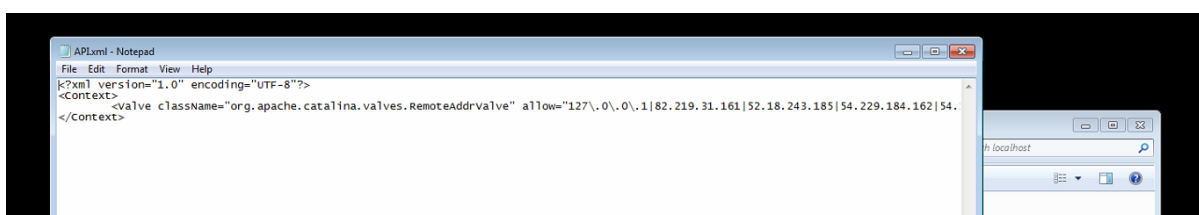

Adding Wonde to the ePortal API file:

Wonde integrates with your Facility system via ePortal. To ensure a successful integration, please complete the following steps:

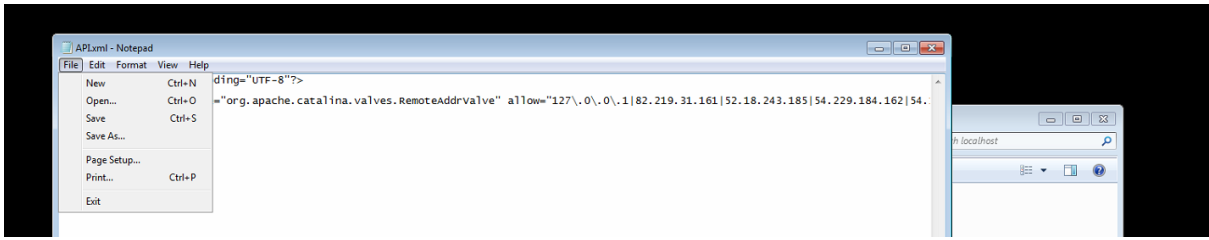

1. Navigate to the API.xml file location – the filepath is normally C:\Facility\ePortal\conf\Catalina\localhost but please note that the Drive lettering may vary.

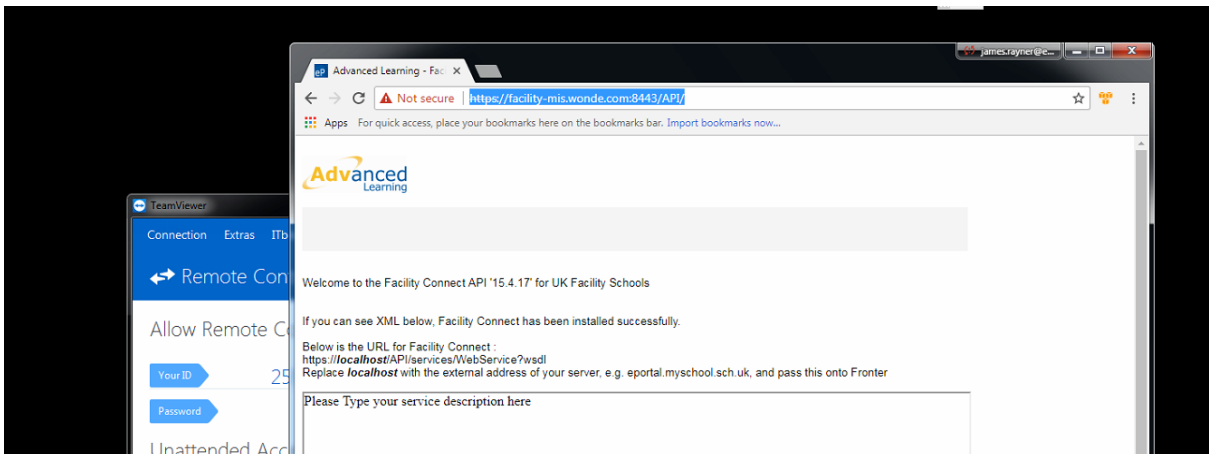

2. **Right click** and **Edit** the API.xml file and enter in the IP's of 52.18.243.185 and 82.219.31.161. It is important to ensure the IP addresses are separated from other IP's with the pipe ('|') character and added alongside existing IPs. They should be added as the following:
 - ...|82.219.31.161|52.18.243.185

3. **Save** the changes to the API.xml file and determine the external ePortal address, for example <https://eportal.schoolname.co.uk>.

The ePortal address can often be found on the school server's desktop as a shortcut. An addition you can test is this URL as shown below:

4. Please let Wonde know this has been completed, along with the ePortal address (i.e. <https://eportal.schoolname.co.uk>) either by emailing us at support@wonde.com or calling us on 01638 779144.
5. The Wonde team will then complete the process and confirm the connection is working successfully.
